

Lab 1 Working with IAM

In this challenge, you will create an Identity and Access Management (IAM) user that has full administrator access. First, you will create an IAM user, and then you will create a user group. Next, you will assign a user to the group, and then you will attach a policy to the group. Finally, you will implement multi-factor authentication (MFA) for the root account. Note: Once you begin the challenge lab, you will not be able to pause, save, or exit and then return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

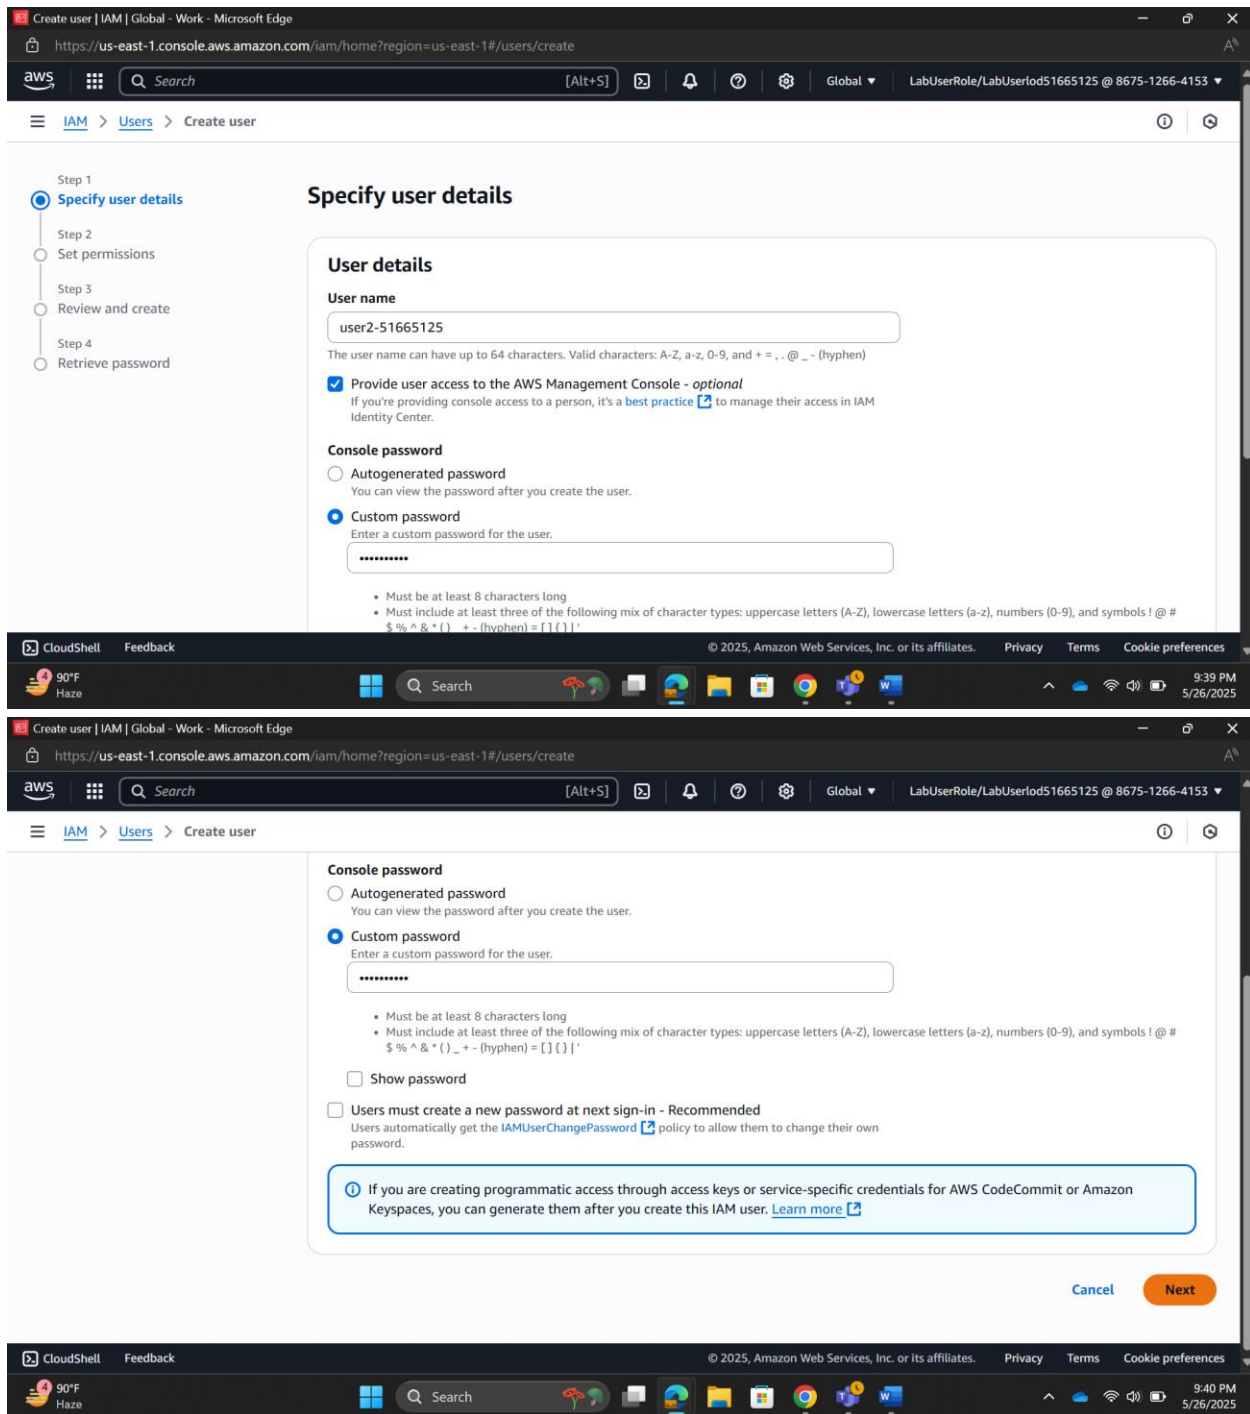

Task 1: Create an IAM User

IAM -> access management -> users -> create user

The screenshot displays the AWS IAM console interface. The top navigation bar shows the AWS logo, a search bar, and the current region 'Global'. The left sidebar contains the 'Identity and Access Management (IAM)' menu, with 'Users' selected under the 'Access management' section. The main content area is titled 'Users (1)' and includes a 'Create user' button. Below the title, a table lists the existing IAM user:

☐	User name	Path	Group	Last activity	MFA	Password age
☐	User1-51665125	/	0	-	-	2 minutes

The bottom of the screenshot shows the Windows taskbar with the date and time '9:39 PM 5/26/2025'.

Create user | IAM | Global - Work - Microsoft Edge

https://us-east-1.console.aws.amazon.com/iam/home?region=us-east-1#/users/create

aws Search [Alt+S]

Global LabUserRole/LabUserIod51665125 @ 8675-1266-4153

IAM > Users > Create user

Step 1 Specify user details

Step 2 **Set permissions**

Step 3 Review and create

Step 4 Retrieve password

Set permissions

Add user to an existing group or create a new one. Using groups is a best-practice way to manage user's permissions by job functions. [Learn more](#)

Permissions options

- ☐ Add user to group
Add user to an existing group, or create a new group. We recommend using groups to manage user permissions by job function.
- ☐ Copy permissions
Copy all group memberships, attached managed policies, and inline policies from an existing user.
- ☒ **Attach policies directly**
Attach a managed policy directly to a user. As a best practice, we recommend attaching policies to a group instead. Then, add the user to the appropriate group.

Permissions policies (1356)

Choose one or more policies to attach to your new user.

Congratulations! [Print](#)

Your dedication and hard work really paid off!

100%

Areas where you excelled

- Create an IAM user**
Looks like you have a strong grasp on this material.
- Create a user group**
You were really strong in this area.
- Configure MFA for a user**
After completing this section, it's obvious you know what you're talking about.

89°F Haze 9:54 PM 5/26/2025

You are done with the lab!!!!
